

Toshiba Satellite E45-B4100 Cooling Fan Replacement

Guide for how to manually remove and replace the cooling fan for the Toshiba Satellite E45-B4100. This guide is useful for when a laptop is consistently overheating, and will add to the longevity of the computer.

Written By: Brendan Sweeney

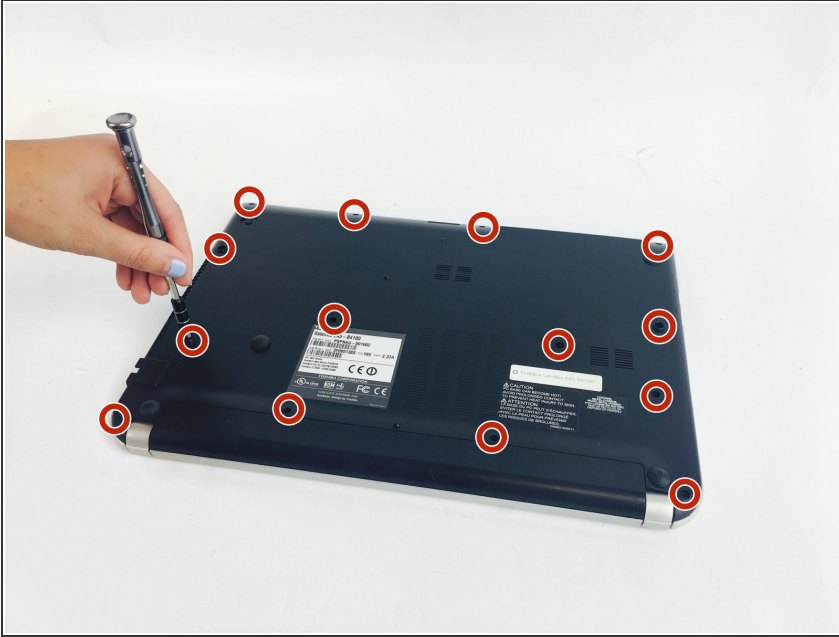

TOOLS:

- [Spudger](#) (1)
 - [Phillips #0 Screwdriver](#) (1)
 - [Heavy-Duty Spudger](#) (1)
-

Step 1 — Battery Replacement

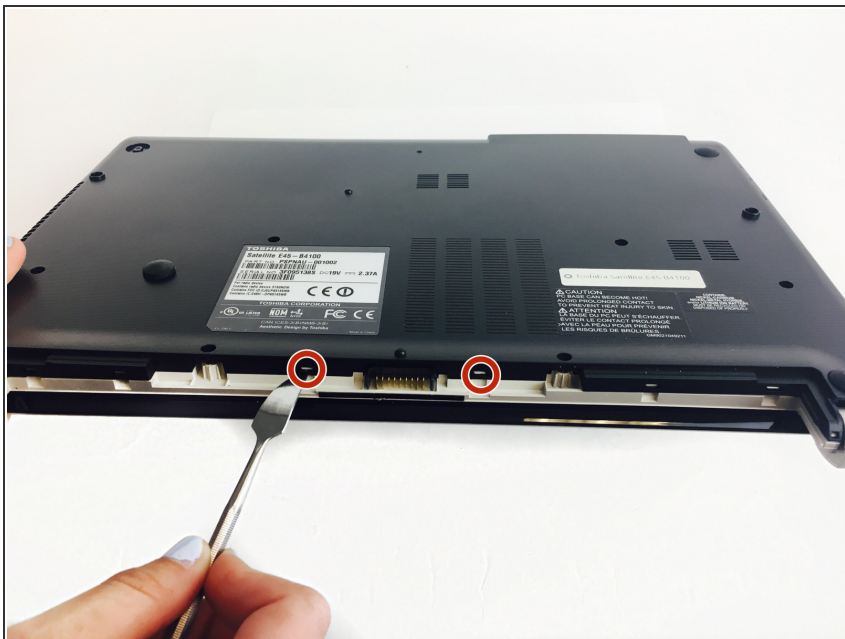

- Remove the fourteen 3.75mm screws with a Phillips #0 Screwdriver as shown.

Step 2

- Gently pull out the battery.

Step 3 — Cooling Fan

- Using a spudger, poke the white tabs in by the battery until you hear a click.

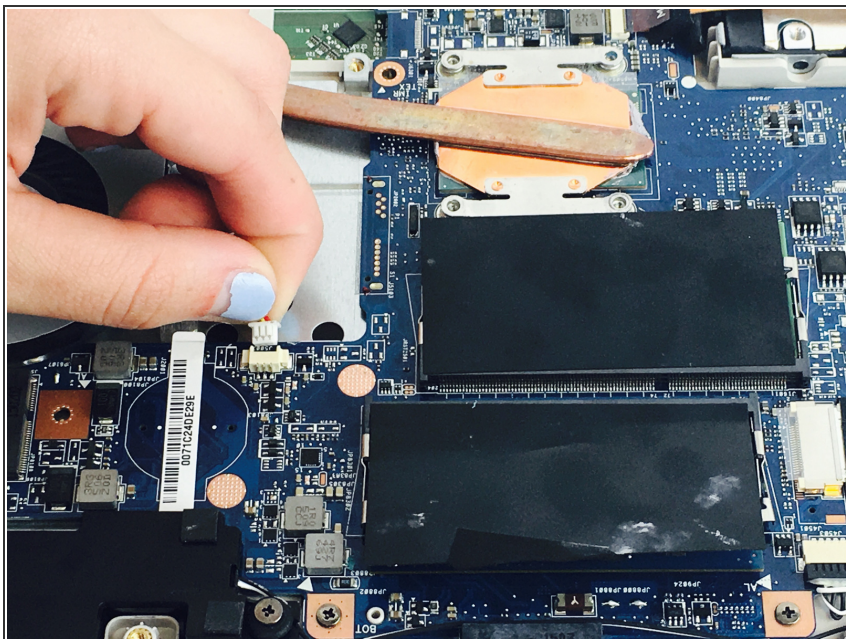

Step 4

- Separate the laptop by sliding a spudger in between the black and silver covers.

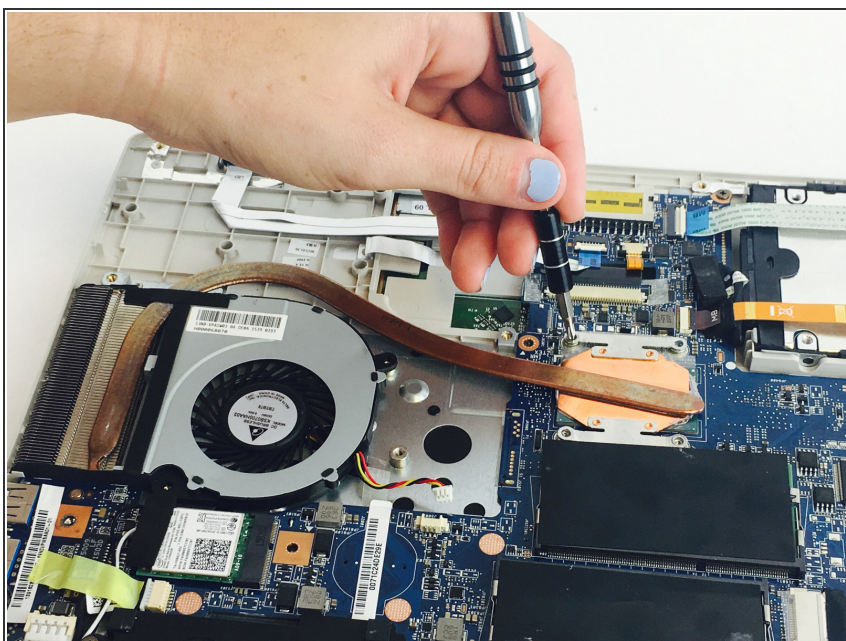

⚠ Be sure to use ESD safe tools, we recommend using the [iFixit Pro Tech Toolkit](https://www.ifixit.com/Tools/ESD-Safe-Tools).

Step 5

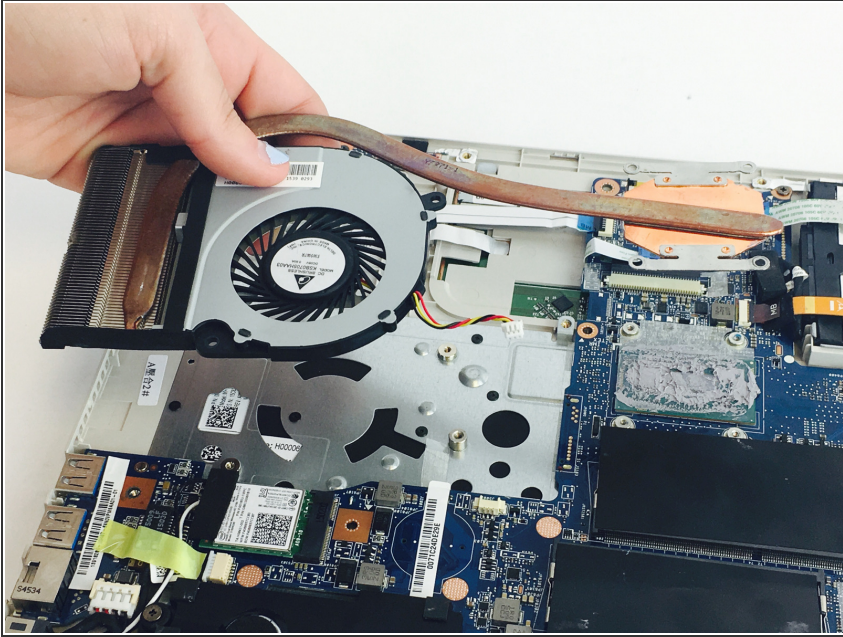

- Disconnect the Cooling Fan from the Motherboard by gently pulling away on the white tab.

Step 6

- Unscrew the two 3.75mm screws around the Cooling Fan and the copper attachment as shown with the #0 Phillip's Head screwdriver.

Step 7

- Remove the attachment from the Processor by gently rotating and lifting.

To reassemble your device, follow these instructions in reverse order.
